AIR CLEANERS

MEDIA HIGH EFFICIENCY AIR CLEANERS

WHERE DO THE POLLUTANTS COME FROM?

These tiny creatures and particles occur naturally. When they infiltrate your home and multiply unchecked that's when the trouble starts. Homes today are built much "tighter" so less fresh air enters and the concentration of pollutants in the air inside the home rises dramatically. In fact, the Environmental Protection Agency (EPA) estimates that indoor air pollution is several times greater than outdoor air pollution.

GENERAL AIRE — AC SERIES — MERV 11

- GENERALAire AC Series Air Cleaners with Micro-fiber expandable media, efficiently remove airborne microscopic particulates at 75% minimum average efficiency down to 0.01 microns.
- 97% efficient by weight of airborne particles ranging as low as 0.01 microns.
- The MERV 11 no-tear micro-fiber expandable media is strung for easy media replacement. The very low pressure drop media characteristics allows for better heating and cooling equipment operation.
- The efficient media design extends filtration effectiveness. The micro-fiber media replacement interval is every 12 months, versus cartridge media filters required at 6 months.
- The highly efficient, micro-fiber expandable media meets MERV 11 test standard ANSI/ASHRAE 52.2-1999.

- Opti-Fiber Media delivers an effective Minimum Efficiency Reporting Value (MERV) that performs to remove airborne particulates efficiently down to 1.0 micron.
- The Spun bonded fibers are free of any chemical binders and is hydrophobic (does not absorb moisture)
- The Opti-Fiber high initial efficiency media resists shredding assuring reliable and dependable dust fighting capabilities.
- The aggressive Opti-Fiber Media has been tested using ANSI/ASHRAE 52.2-1999 standard. (MERV 10)
- MERV 10 Opti-Fiber Media
- Opti-Fiber Media with low pressure drop characteristics
- 61.8% minimum average efficiency 1.0 to 3.0 microns.
